

# KENYA SEED COMPANY LTD.

## Top Quality Seed

### IMPORTANT INFORMATION FOR SEED BUYERS & FARMERS

*Changing weather and farming environment calls for enhanced  
crop care & protection*

As one of the key players in the agricultural sector, Kenya Seed Company would like to clarify the following:-

- That the Company adopted the use of more effective yet expensive seed dressing chemicals as a strategy to providing enhanced protection against maize crop diseases and pests in the early growth stages. This seed treatment is **not a cure for emerging diseases such as Maize Lethal Necrotic Disease (MLND)** as portrayed in a section of the media.
- We encourage all farmers to undertake good agronomic practices such as crop rotation and application of preventive chemicals as advised by experts.
- With the enhanced use of seed dressing chemicals and increase in operational costs, the company reviewed its maize seed prices by Ksh. 30/- per kg.

Our recommended retail prices are;  
2kg- 360/=, 10kg – 1,800/=, 25kg – 4,500/=

360/=	1800/=	4500/=	H 614 D
			

We wish to assure our farmers and all other stakeholders that the company is committed to availing adequate and high quality seeds always.
